

Is your AI use case ready to build?

A structured team assessment for health and CRVS programs · 20 to 30 minutes · finish across as many sittings as you need

<https://ai-readiness-assessment-survey.vercel.app>

The tool does not assume AI is the answer. You describe the use case in plain language; it ends with a scoping report that weighs an AI solution against hybrid and simpler non-AI options, and tells you what to fix first.

The questions · 32 across 4 sections, in any order

01 Use Case Definition **9** open-ended + a 0-5 rating + goal builder

02 Data Readiness **14** multiple choice + 7 rating statements

03 Safety & Responsible Use **4** open-ended

04 Country-Level Readiness **5** open-ended

Every open question has a worked example showing the expected level of detail. "I don't know" and "Not sure" are always valid answers. Everything autosaves as you type.

How it flows

- 1 Sign in and team up.** Create an account and a team; colleagues join with the 8-character invite code shown on your dashboard.
- 2 Answer together.** Assessments belong to the team: anyone can open one, edit, and continue where a colleague left off.
- 3 Review and close gaps.** The progress page reviews each started section: what you covered, what to elaborate, question by question. Click any item to jump straight to it, and confirm the summary when it reads right.
- 4 Generate the report.** One click, about half a minute. Improve answers anytime and regenerate.

Your scoping report

Non-AI digital

Hybrid

AI solution

Use case: Ready

Data: Some gaps

Safety: Ready

Country: Some gaps

- A clear recommendation across **non-AI, hybrid, and AI** approaches
- Up to **three realistic solution options** with advantages, limitations, and relative costs
- A **readiness rating** of all four areas, with findings
- Key gaps paired with actions**, on a now / before-pilot / before-scale roadmap
- Download as PDF** to share with leadership

Honest by design: unanswered areas are marked "unable to assess", never guessed.

You are piloting this: tell us everything

- The **"Feedback for this page"** button sits at the bottom right of every page
- Pick an issue type (confusing question, broken button, idea...), add a short note, submit
- Every report reaches the study team with the exact page and question attached

Just want a look first?

- Choose **"Try it without an account"** on the landing page
- Guest mode shows the full questionnaire; nothing you enter is saved

Confidential. Your answers are visible only to your team and the study team, and are never used to train AI models. The report is advisory input to your team's decision, never an approval or rejection of a project.
